

CONTEXT AND SUBJECT OF THE CONFERENCE

The third conference of the DFG-research project "The Ancient Fable Tradition and Early Christian Literature" provides an opportunity for dialogue between different areas of scholarship on aging that have rarely been in conversation before.

It explores, on the one hand, the ethics of aging in ancient Jewish, early Christian, and Greek and Roman sources and traditions, with special attention to the ancient fable tradition. On the other hand, it creates a hermeneutical bridge with present-day gerontological research by critically reflecting on the modern Western discourse of aging and its ensuing norms and values.

With its emphasis on interdisciplinary discussion, the conference aims to answer several questions: To what extent is the ethics of aging dependent on culture? How have ancient ethical norms and values regarding old age persisted until today or how have they been transformed across time? How can ancient perspectives on old age enrich our present-day attitudes towards aging-and vice versa?

ORGANIZERS:

Dr. Albertina Oegema
